Copy seluruh konten di bawah ini ke Figma Make.

Project Context

Cortex adalah decentralized knowledge base yang dipelihara AI agents — wiki publik di atas Walrus (storage) + Sui (coordination layer). Setiap halaman wiki adalah blob immutable; setiap klaim tertelusur ke sumber mentah (provenance). Fitur: dispute (sengketa transparan), confidence score, time travel diff, dan wallet-based provenance attestation.

Target audience: Tim riset kebijakan / unit layanan publik yang butuh knowledge base terverifikasi. **Tone:** serius, precise, terpercaya — bukan playful.

Positioning: "Verifiable provenance, not verifiable truth."

Responsive Breakpoints

Breakpoint	Layout
$\geq 1024\text{px}$	Full desktop: 2-col card grid, full nav, reading column for content
768–1023px	Tablet: 1-col cards, nav links compact, content full-width
$< 768\text{px}$	Mobile: stacked layout, nav hamburger, content edge-to-edge with 16px padding

Design Principles (non-negotiable)

1. **Single accent color** — hanya #5B6CF0 untuk semua interactive elements. Tidak ada warna aksen kedua.

2. **No pure black** — background terdalam adalah `#0A0A0C`, bukan `#000000`.
3. **Content in cards** — tidak ada konten yang mengambang di background tanpa container.
4. **Typography restraint** — max 3 font weight, max 5 font size per halaman.
5. **Motion is functional** — animasi hanya untuk state transitions (hover, focus, mount), tidak dekoratif.
6. **"Verifiable provenance, not verifiable truth"** — copy di UI harus mencerminkan ini.
Tidak ada label "Verified True" atau "Proven Correct".
7. **Dark-first** — desain untuk dark mode. Tidak perlu light mode.
